

Mullion Types and Sizes

- View has focused on the most common Mullion Systems and have determined the products that work best with View Immersive Experience.
- Mullion depth from face of mullion to glass surface must be $>3.5''$ to mount the display and to allow for airflow.
- Requirements for Mullion Systems to work with the View Immersive Experience are:
 - The mullion does not have internal structures that prevent cable routing.
 - The mullion systems are structurally capable to mount the View Immersive Experience.
- There are many more mullion systems that customers may be able to use. Consult with the View Immersive Experience Engineering team to validate mullions that are not on the approved list.
